CHANGE MATRIX – IDETECT

Carlo De Los Reyes, Jorich Maricar Enoria, Vesti Sahm Angielo Mercado, Ishmael Luis Santiago

Complete prioritized matrix of the recommendations and suggestions from the three IT experts.

High Priority – Red **Medium Priority** – Blue **Low Priority** - Yellow

Status verified against the code on 4 Nov 2026: Implemented (23) Partial (15) Not yet (4) | Reasons and evidence: pages 4-7

No.	PRIORITY	AREA	ITEM TO ADDRESS	SOURCE	DELIVERABLES	STATUS
1	High Priority	Admin	Implement comprehensive audit logging for user actions, including login/logout times, record edits, and other system activities.	IT Experts 1, 2 & 3	Audit Log / History Module	IMPLEMENTED
2	High Priority	Admin	Add system-generated ticket/reference numbers to data entries, reports, refusals, and transactions for tracking and evidence.	IT Experts 1 & 3	Ticketing / Reference Number System	IMPLEMENTED
3	High Priority	Admin	Improve establishment suspension management by recording the reason, timeframe/date, notification, and detailed suspension information.	IT Experts 1, 2 & 3	Suspension Management Module	PARTIAL
4	High Priority	Security	Protect beneficiary and ID information by preventing public exposure and using masked ID numbers for authorized administrative views.	IT Experts 1 & 2	ID Privacy / Masking	IMPLEMENTED
5	High Priority	Notification	Add notifications for important events such as record edits, disputes, reports, suspensions, and establishment-related actions.	IT Experts 1, 2 & 3	Notification System	IMPLEMENTED
6	High Priority	Application	Include a beneficiary photo/visual identification in beneficiary records and applications.	IT Experts 1 & 3	Beneficiary Photo Feature	NOT YET
7	High Priority	Admin	Provide an auditing report for business establishments and maintain historical records of relevant establishment activities.	IT Expert 3; related to IT Experts 1 & 2	Establishment Audit Report	IMPLEMENTED
8	High Priority	Application	Strengthen dispute resolution, including establishment-initiated disputes, administrator notification/routing, mandatory establishment identification, and beneficiary acknowledgment.	IT Experts 2 & 3	Dispute Resolution Module	IMPLEMENTED
9	High Priority	Security / Admin	Strengthen user access control, including separate establishment user roles and restrictions on who can modify staff accounts.	IT Experts 1 & 2	Role-Based Access Control	IMPLEMENTED
10	High Priority	Database	Ensure the database is kept up to date to maintain current and reliable records.	IT Expert 2	Database Maintenance Procedure	PARTIAL
11	Medium Priority	Admin	Require establishments to have a license number as part of their records.	IT Expert 2	Establishment License Number Field	PARTIAL
12	Medium Priority	Admin	Improve establishment information by displaying the client name instead of owner name and identifying whether the establishment is franchise or company-owned.	IT Expert 1	Establishment Information Update	PARTIAL
13	Medium Priority	Admin	Implement secure password reset through a portal link, allowing users to change their own passwords rather than having administrators set them.	IT Expert 2	Secure Password Reset	IMPLEMENTED
14	Medium Priority	Admin	Restrict staff accounts to admin view-only access where appropriate.	IT Expert 2	Staff Account Permissions	IMPLEMENTED
15	Medium	Admin	Restrict editing of staff accounts so that not all administrators have	IT Expert 2	Administrative	IMPLEMENTED

	Priority		account-management privileges.		Permission Control	
16	Medium Priority	Admin	Add bulk import functionality for monthly, quarterly, and yearly audit records.	IT Expert 1	Bulk Import Feature	PARTIAL
17	Medium Priority	Application	Improve bulk file uploads by displaying error notifications, upload counts, and success notifications.	IT Expert 2	Bulk Upload Feedback	IMPLEMENTED
18	Medium Priority	Admin	Establish a defined retention period for audit/reporting data of one year.	IT Expert 1	Data Retention Policy	IMPLEMENTED
19	Medium Priority	Admin	Add a defined character limit for refusal reports and include establishment/branch, dedicated ID number, and ticket number fields.	IT Expert 1	Refusal Report Enhancement	PARTIAL
20	Medium Priority	Admin	Add a 2,500-character limit to the establishment suspension reason field.	IT Expert 1	Suspension Reason Field	IMPLEMENTED
21	Medium Priority	Admin	Require a ticket number for every data entry and organize year-end reports according to those ticket numbers.	IT Expert 1	Ticket-Based Reporting	PARTIAL
22	Medium Priority	OSCA Portal	Do not publicly expose senior citizens' age or ID number; optionally provide printed details per person where appropriate.	IT Expert 1	Privacy Controls	IMPLEMENTED
23	Medium Priority	OSCA Portal	Do not expose ID numbers in fraud flags; use internal references/ticket codes for reporting and standardize the establishment field.	IT Expert 1	Fraud Flag Privacy / Reference Code	IMPLEMENTED
24	Medium Priority	OSCA Portal	Record the date and time of login for senior citizen records.	IT Expert 2	Record Access Log	PARTIAL
25	Medium Priority	OSCA Portal	When a record is edited, notify the ID owner and record the reason for the edit.	IT Expert 2	Record Edit Notification	IMPLEMENTED
26	Medium Priority	Admin / Maintenance	Implement scheduled maintenance with updates performed according to a defined rotation or period.	IT Expert 2	Maintenance Schedule	NOT YET
27	Medium Priority	Admin / Maintenance	Provide a process for new feature updates.	IT Expert 2	Feature Update Procedure	PARTIAL
28	Medium Priority	Admin / Maintenance	Provide hotfix deployment for immediate system fixes.	IT Expert 2	Hotfix Deployment Procedure	PARTIAL
29	Medium Priority	Application	Require the scanning feature to request camera access permission before scanning.	IT Expert 2	Camera Permission Prompt	PARTIAL
30	Medium Priority	Application	Ensure displayed language matches the selected/applied language setting.	IT Expert 2	Language Consistency	PARTIAL
31	Medium Priority	Application	Add an “Others” option to the “File Dispute” function.	IT Expert 2	Dispute Category Option	IMPLEMENTED
32	Medium Priority	Application	Display a system-down/unavailable indicator when the system is not operational.	IT Expert 2	System Status Indicator	PARTIAL
33	Medium Priority	Application	Add a Contact Us section to the establishment application homepage.	IT Expert 2	Contact Us Section	IMPLEMENTED
34	Medium Priority	System / Identification	Do not use VVID as recommended by the IT expert.	IT Expert 2	Identification Method Review	IMPLEMENTED
35	Low Priority	Admin	Add a yearly registration graph to the dashboard.	IT Expert 1	User Acceptance Graph	PARTIAL
36	Low Priority	Beneficiary	Add a notification that clearly displays the establishment name	IT Expert 1	Establishment	IMPLEMENTED

		App	associated with the transaction.		Notification	
37	Low Priority	Beneficiary App	Change the specified label to red for improved visual identification.	IT Expert 1	UI Label Update	NOT YET
38	Low Priority	Beneficiary App	Record all beneficiary-app actions in the history tab.	IT Expert 3	Beneficiary History Tab	IMPLEMENTED
39	Low Priority	Application	Add an option for a business establishment to dispute on behalf of a beneficiary.	IT Expert 3	Establishment Dispute Option	IMPLEMENTED
40	Low Priority	Admin	Add a detailed report/reminder when suspending an establishment, including notification and timeframe.	IT Expert 3	Suspension Reminder / Report	PARTIAL
41	Low Priority	Admin / Legal	Maintain evidence, timeline, and ticketing of reports for potential court cases.	IT Expert 3	Evidence & Case Timeline	IMPLEMENTED
42	Low Priority	Application	Provide a Beneficiary Website.	IT Expert 3	Beneficiary Website	NOT YET

Change Matrix - Implementation Status Annex

Each of the 42 items in the change matrix was checked against the code (API routes, database migrations, staff portal, establishment app, beneficiary app) and the project documentation, as of 4 November 2026. Item numbers match the No. column beside the matrix.

Summary: 23 implemented, 15 partially implemented, 4 not yet implemented (42 total).

A. Evidence for every item

No.	Deliverable	Status	What the system does (evidence)
1	**Audit Log / History Module**	IMPLEMENTED	Audit log (migration 009) with agency-scoped viewer, filters, CSV/PDF reports. Logs staff and establishment login, failed login, lockout, logout (incl. idle_timeout), record create/edit/delete, suspensions, role changes, exports and sensitive-ID reveals. Append-only guards (migrations 026, 053). Gap: beneficiary-app logout and ordinary record views are not logged.
2	**Ticketing / Reference Number System**	IMPLEMENTED	Database-generated references DSP- (disputes and refusals), FLG-, EST-, BEN-, VER- (migrations 035, 036). Searchable in the staff portal; shown in scan responses, CSV exports and the beneficiary app (disputes and History).
3	**Suspension Management Module**	PARTIAL	Establishment suspension needs a reason (max 2,500), sends an SMS to the establishment, blocks login with a status message and writes an audit row (establishments.js, PATCH /:id/suspend). Start/end dates and review reminders exist only for beneficiary suspensions (migration 041).
4	**ID Privacy / Masking**	IMPLEMENTED	Masking done at API level: ID keeps last 2 characters, birth date omitted. Full reveal only by matching-agency staff after password step-up, logged as sensitive_data_revealed (migration 040). CSV exports masked. Tests: privacy.test.js, privacyRoutes.test.js.
5	**Notification System**	IMPLEMENTED	Real-time staff alerts (SSE stream, DB triggers in migration 049) for disputes, fraud flags, new establishment registrations, auto-suspensions, SLA breaches and suspension reviews. Beneficiary push/SMS for scans, dispute updates and callbacks. Establishment SMS on approve/suspend/revoke. Owner push + SMS when a record is edited (see item 25).
6	**Beneficiary Photo Feature**	NOT YET	No photo capture, storage or display for beneficiaries exists in the API, portal or beneficiary app (searched; only the ID-card photo zone used by OCR and an unsaved local avatar).
7	**Establishment Audit Report**	IMPLEMENTED	Audit Reports window (activity, staff, security, data export; month/quarter/half-year/year/custom; CSV/PDF) scoped to BPLO establishment activity. Read-only Record History panel on the establishment detail page. Establishment scan-history export (establishmentHistoryExport.test.js).
8	**Dispute Resolution Module**	IMPLEMENTED	Establishment-filed disputes (migration 052, POST /api/disputes/on-behalf). DB trigger routes each new dispute to the right office (migration 048). Establishment name mandatory (disputes.js validation). Beneficiary acknowledges the staff response (migration 058, /acknowledge-response). 24-hour acknowledgement SLA.
9	**Role-Based Access Control**	IMPLEMENTED	Agency-scoped Super Admin roles (migrations 038, 039). Only the matching Super Admin can create, edit, deactivate or reset staff (staff.js). Establishment Super User and Regular User roles with invitations (migrations 042-046). Tests: staffAuthorization, authorityRoles, establishmentUsers.
10	**Database Maintenance Procedure**	PARTIAL	Automated jobs keep data current: expiry-status, expiry-alert, flag-decay and suspension-reminder schedulers, offline status sync. Managed Supabase database. DEPLOYMENT_GUIDE section 10. No written freshness / reconciliation / backup-restore procedure yet.
11	**Establishment License Number Field**	PARTIAL	business_permit_no is mandatory and unique for every establishment (migration 002; labelled Business Account Number), with permit-expiry tracking (migration 018). No separate license_number column.
12	**Establishment Information Update**	PARTIAL	contact_person added (migration 054) so the on-site contact can differ from the registered owner; owner relabelled Registered Owner (as on permit) in create form, bulk template and detail page. No franchise / company-owned indicator.
13	**Secure Password Reset**	IMPLEMENTED	Staff and establishment forgot-password send a time-limited reset link to the /reset-password page (auth.js). Establishment users set their own password through a 24-hour single-use invitation. Strong password policy on all flows. Super Admin direct reset kept only as an audited fallback.
14	**Staff Account Permissions**	IMPLEMENTED	Regular OSCA/PDAO/BPLO admins have read-only access to the staff directory; staff mutations are enforced server-side (staff.js requireOfficeSuperAdmin).
15	**Administrative Permission Control**	IMPLEMENTED	Only the agency Super Admin can edit staff accounts. The last active Super Admin cannot be deactivated, role changes are audited, and there is no global super admin.
16	**Bulk Import Feature**	PARTIAL	Bulk CSV import exists for beneficiaries and establishments. Periodic audit data (monthly / quarterly / half-year / yearly) is available as exportable reports. Importing external audit records is not implemented.
17	**Bulk Upload Feedback**	IMPLEMENTED	Bulk-import modal shows a preview with valid / invalid counts, per-row error messages, a final summary (imported, duplicates, skipped) and success state.
18	**Data Retention Policy**	IMPLEMENTED	Defined retention with archive instead of deletion (migration 051, GET /audit-logs/retention, POST /audit-logs/archive, AUDIT_LOG_RETENTION_POLICY.md). Period set to 5 years, longer than the 1 year suggested.

No.	Deliverable	Status	What the system does (evidence)
19	**Refusal Report Enhancement**	PARTIAL	Refusals use the dispute workflow: automatic DSP- ticket, mandatory establishment name, routing to BPLO, SLA. No character limit on the explanation, no branch field, no dedicated ID-number field.
20	**Suspension Reason Field**	IMPLEMENTED	2,500-character limit enforced by the API (establishments.js) and by a live counter in both BPLO suspension forms. 2,500 accepted, 2,501 rejected (establishmentSuspension.test.js).
21	**Ticket-Based Reporting**	PARTIAL	Reference numbers exist on all main records and appear in the verification, fraud and dispute exports. Audit reports are grouped by month, action or staff member, not by ticket; audit rows themselves are not numbered.
22	**Privacy Controls (OSCA Portal)**	IMPLEMENTED	Age and ID number are not exposed: ID masked to last 2 characters, exact birth date omitted from lists and details; no public route returns them. Optional per-person print not built.
23	**Fraud Flag Privacy / Reference Code**	IMPLEMENTED	Fraud flags are identified by FLG- reference and the originating scan's VER- reference; ID numbers are masked in lists and CSV; restricted OCR data is hidden.
24	**Record Access Log**	PARTIAL	Staff and establishment login / logout / failed login are logged with time, as are sensitive reveals, exports and case files. Ordinary record views are not logged.
25	**Record Edit Notification**	IMPLEMENTED	PUT /api/beneficiaries/:id now requires a reason (max 500 characters; required box in the edit form), saves it in the audit entry with the changed fields and notice result, and sends the ID owner a push + SMS naming the kinds of details changed and the reason, never the values. SMS goes to the number on file before the edit. Staff-only notes do not notify. Test: recordEditNotification.test.js.
26	**Maintenance Schedule**	NOT YET	No defined maintenance rotation or window is documented or enforced.
27	**Feature Update Procedure**	PARTIAL	GitHub to Vercel / Northflank deployment, versioned SQL migrations applied on API start, documented in DEPLOYMENT_GUIDE sections 2 and 10. No formal written update procedure.
28	**Hotfix Deployment Procedure**	PARTIAL	A hotfix can be pushed and redeployed, and a bad deploy rolled back from the platform deployment history (DEPLOYMENT_GUIDE section 10). No formal written hotfix procedure.
29	**Camera Permission Prompt**	PARTIAL	The OS asks for camera permission when the scanner opens (CAMERA in AndroidManifest, NSCameraUsageDescription on iOS). No custom explanation dialog or denial screen; a denial shows a generic camera-initialization error.
30	**Language Consistency**	PARTIAL	Beneficiary app has an EN / FIL selector with localized labels, dates and statuses. Establishment app is English-only and has no language setting. Some server-generated notifications remain English.
31	**Dispute Category Option**	IMPLEMENTED	An Other dispute type exists in the beneficiary app (English and Filipino) and is validated and stored by the API (migration 034).
32	**System Status Indicator**	PARTIAL	Beneficiary app shows iDetect is unavailable with a retry button; the establishment app shows OFFLINE RESULT - SERVER UNREACHABLE; GET /api/health exists. No maintenance-mode flag or global status banner.
33	**Contact Us Section**	IMPLEMENTED	BPLO contact card on the establishment app login and home screens (bplo_contact_card.dart).
34	**Identification Method Review (VVID)**	IMPLEMENTED	A search of the API, migrations, web portal and both Flutter apps finds no VVID. Identification uses the ID number, OCR extraction and cross-validation.
35	**User Acceptance Graph**	PARTIAL	Dashboard shows a registration-per-month chart for the last 12 months (dashboard.js getRegistrationTrend, RegistrationTrendChart). No multi-year view.
36	**Establishment Notification**	IMPLEMENTED	Scan-result notifications name the establishment: Your ID was verified at <business name> on <date> (verification.js).
37	**UI Label Update**	NOT YET	No label colour was changed; the matrix does not say which label should be red.
38	**Beneficiary History Tab**	IMPLEMENTED	History tab merges scan transactions, disputes and reports into one paginated timeline with reference numbers.
39	**Establishment Dispute Option**	IMPLEMENTED	POST /api/disputes/on-behalf and the File Dispute for Beneficiary screen in the establishment app; the request channel (in person, phone, written) is recorded; the beneficiary is notified. Test: disputeOnBehalf.test.js.
40	**Suspension Reminder / Report**	PARTIAL	Beneficiary suspensions have start/end dates, daily reminders from 7 days before the end date and when overdue (suspensionReminderScheduler.js). Establishment suspensions only get the SMS / login notice, with no timeframe or reminder.
41	**Evidence & Case Timeline**	IMPLEMENTED	Case file tab: one CSV per reference number (DSP-, FLG-, VER-, EST-, BEN-) with the record, related scan, flags, disputes and the full audit timeline; IDs masked, step-up required, download audited. Not claimed to be legally admissible.
42	**Beneficiary Website**	NOT YET	Only the staff portal (apps/web) and the Flutter apps exist; there is no beneficiary-facing website.

B. Items not yet implemented - reasons to give the adviser and panel

No.	Item	What covers the need today	Why it was not implemented
6	**Beneficiary Photo Feature**	Deferred on purpose, not overlooked. The physical Senior Citizen / PWD ID already carries the holder's photograph. The scanner checks that a face photo is present on the card (face-detection guard) and the cashier compares the person with the card.	(1) A stored photo is sensitive personal data under RA 10173 and needs explicit consent, a stated purpose, protected storage and a retention rule. Those decisions belong to OSCA / PDAO and their data protection officer and have not been issued. (2) The system follows data minimisation: IDs are masked, birth dates are hidden. Storing one more image per person works against that and enlarges the impact of any breach. (3) It would duplicate a check that already happens on the physical card. Next step: build it once the consent notice, access roles and retention period are approved.
26	**Maintenance Schedule**	Deployments are on managed platforms (Vercel, Northflank, Supabase). Database changes are versioned migrations applied automatically when the API starts, and a bad release can be rolled back from deployment history.	Most updates need no downtime window, so a fixed rotation would be arbitrary. The service window and notice period must be set by whoever operates the system for the LGU, and no operations owner has been designated yet. It is an operating policy, not a software feature. Once the owner and window are agreed it can be written into the deployment guide and linked to a status banner (item 32).
37	**UI Label Update**	Nothing changed.	The recommendation says to make the specified label red but does not say which label. Guessing risks recolouring the wrong element, and red is used in the design system for denied / error states, so a wrong choice could look like a warning. It is a quick change once the expert points to the label.
42	**Beneficiary Website**	Beneficiaries are served by the mobile app with SMS OTP and PIN. People without smartphones are covered by establishment-filed disputes on their behalf, BPLO callback requests and staff-assisted channels.	It is low priority and extra-large in scope. A public website would expose beneficiary data to the open internet, needs its own authentication, UI and security review, and widens the attack surface. We chose to harden the existing channels first. The beneficiary app is a Flutter project with a web target folder, so a web build can be evaluated later without rebuilding the API.

C. Partially implemented items - what is done and what remains

No.	Item	Done	What remains and why
3, 40	**Establishment suspension timeframe and reminder**	Reason (max 2,500), SMS notice, login message and audit entry are done. Date range and reminders are done for beneficiary suspensions.	Establishment suspensions are compliance-based: they end when BPLO confirms the requirement is met, not on a calendar date. An automatic end date could quietly reinstate a non-compliant business, which is why beneficiary suspensions also do not auto-clear and are flagged for staff review. Adding start/end dates and reminders for establishments can reuse migration 041 and the existing reminder job.
10	**Database Maintenance Procedure**	Schedulers keep statuses, expiries and flags current; managed database hosting.	A freshness procedure needs a named data owner and targets (how old data may be, recovery time) that the LGU must set. The automation is in place; the written procedure and a restore test are the remaining step.
11	**License Number Field**	A mandatory, unique business permit / account number with expiry tracking.	That number is the license identifier BPLO issues, so a second license column would hold the same business identity twice. If the expert means a different document, it is a small, low-risk field to add once clarified.
12	**Establishment Information Update**	contact_person field and Registered Owner (as on permit) label.	Client name is not defined precisely in the recommendation. The contact person field covers the real need (franchises and branches where the on-site contact is not the owner). A franchise / company-owned flag is a small addition not yet built.
16	**Bulk Import Feature**	Monthly / quarterly / yearly audit data can be exported; bulk CSV import exists for beneficiaries and establishments.	Importing outside records into the audit log would break its integrity: the log is append-only and imported rows would look as if iDetect generated them. We interpreted the request as periodic audit reporting and delivered it as exports.
19	**Refusal Report Enhancement**	Automatic ticket, mandatory establishment name, BPLO routing, SLA, masked beneficiary ID.	The limit value was not specified, and dedicated ID number is ambiguous (beneficiary, establishment or branch ID). The beneficiary ID is intentionally masked. Character limit and branch field are small additions pending clarification.
21	**Ticket-Based Reporting**	References on all main records and in exports; the year is part of the number (for example DSP-2026-000123).	Year-end audit reports are grouped by month, action or staff member, which is how auditors read them. A per-ticket listing can be produced by sorting the export by reference. Audit rows are not numbered because each belongs to a numbered record, shown in the Affected record column.
24	**Record Access Log**	Logins, logouts, failed logins, sensitive reveals, exports and case files are logged.	Logging every ordinary record view would flood the audit log and bury the evidence that matters. We log the high-risk accesses first; wider view logging needs a volume and retention decision.
27, 28	**Feature Update and Hotfix procedures**	GitHub to Vercel / Northflank deployment, versioned migrations, rollback from deployment history.	The mechanism exists; a formal procedure needs approvers and roles from the LGU IT office. It is an operating document, to be written with item 26.
29	**Camera Permission Prompt**	The OS prompts for camera access when the scanner opens, so scanning cannot happen without consent.	A custom explanation dialog and a denial screen with a link to settings are not built (the permission_handler package is declared but not used). Currently a denial shows a generic error.

No.	Item	Done	What remains and why
30	**Language Consistency**	Beneficiary app switches fully between English and Filipino, including dates and status labels.	The establishment app is English-only by design for cashiers, so it has no language setting that can disagree with what is shown. Some server-generated notifications are still English. Full bilingual coverage of the establishment app is a large translation effort deferred to a later phase.
32	**System Status Indicator**	Unavailable / offline messages in both mobile apps; health endpoint.	A global status banner needs a maintenance-mode flag tied to the maintenance schedule (item 26), which is not defined yet.
35	**User Acceptance Graph**	12-month registration trend on the dashboard.	The system is new, so a multi-year view would show one data point per year. The 12-month trend already shows a full year; a yearly aggregate is a small addition once more years of data exist.
